# How to play Mango Man:

Mangos mangos mangos mangos MANGOS!

Short and simple version:

1. Make sure you have Python installed. If you don't, go here and figure it out: http://www.python.org/download/releases/2.7.3/
2. Make sure you have VPython installed. If you don't, go here and figure it out: http://www.vpython.org/
3. Click on the mangoman.py file in the folder.
4. ????
5. Profit.

Confused? Scroll down to the next page to read the long-winded description of what you should do to play this wonderful mango-y game.

Longer and more detailed version:

1. Do you have Python (version 2.7.3) installed? If so, good. Proceed to the next step. If not, click on the following link: http://www.python.org/download/releases/2.7.3/

   Scroll down to the part of the page that says "Download" and download the appropriate one. If you don't know which one to click, I would suggest starting with knowing what OS you're using. Download the 32-bit version because VPython needs that in order to work. I would also suggest choosing the Installer instead of the program database since that actually walks you through and stuff.

   Here's a picture of what you're looking for.

   ## Download

   This is a production release. Please report any bugs you encounter.

   We currently support these formats for download:

   - Gzipped source tar ball (2.7.3) (sig)
   - Bzipped source tar ball (2.7.3) (sig)
   - XZ source tar ball (2.7.3) (sig)
   - Windows x86 MSI Installer (2.7.3) (sig)
   - Windows x86 MSI program database (2.7.3) (sig)
   - Windows X86-64 MSI Installer (2.7.3) [1] (sig)
   - Windows X86-64 program database (2.7.3) [1] (sig)
   - Windows help file (sig)
   - Mac OS X 64-bit/32-bit x86-64/i386 Installer (2.7.3) for Mac OS X 10.6 and 10.7 [2] (sig). [You may need an updated Tcl/Tk install to run IDLE or use Tkinter, see note 2 for instructions.]
   - Mac OS X 32-bit i386/PPC Installer (2.7.3) for Mac OS X 10.3 through 10.6 [2] (sig).

   Just fucking download Python, okay?

   Once you've downloaded your installer, follow the instructions and get that shit on your computer.

2. Do you have VPython installed? If so, good. Proceed to the next step. If not, click on the following link: http://www.vpython.org/

   Look for the part on the page that says "Download" and click on the appropriate link. Then, download VPython for Python 2.7 (since that's what we just installed). This should be fairly easy. If it's not, then I don't know how I can help you. Just open the file and click "next" until it installs something for you.

3. Click on mangoman.py in the zip folder. Instructions are on the starting screen. Good luck.

4. ????

5. Profit.
